

# Can You Tell?

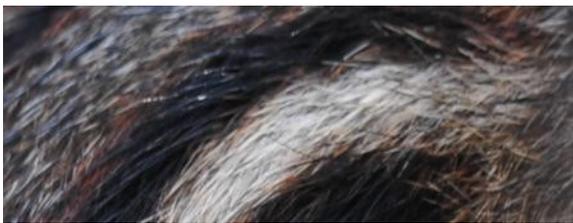

Pennsylvania is home currently to 480 species of wild birds and mammals. Many are familiar to us. Others are not. But when you see only a portion of an animal, it immediately become harder to identify. So how well do you really know the wild birds and mammals of our fields and forests? Could you pick them out of a line-up? For many people that might not be much of a challenge. But what if all you could see was a portion of their body? Would they be as recognizable? The puzzle below offers you a chance to show off your species identification skills. There are eight body parts below. All belong to different animals. Your task is to see these species through the photo snippet. Are you good enough to get the job done? Please know up front, this is not easy. It is meant to be a brain-teaser. Good luck!

# Answers: Can You Tell?

Sometimes seeing only a portion of one of our wild birds and mammals can cloud your ability to identify an animal you surely know. It happens because we usually identify animals by their size and body, not just parts. To help you see these animals that own these parts showcased on the quiz, check out the images below. We promise, you'll see things more clearly and connect with wildlife!

**Wild Turkey**

**Meadow Vole**

**Chipmunk**

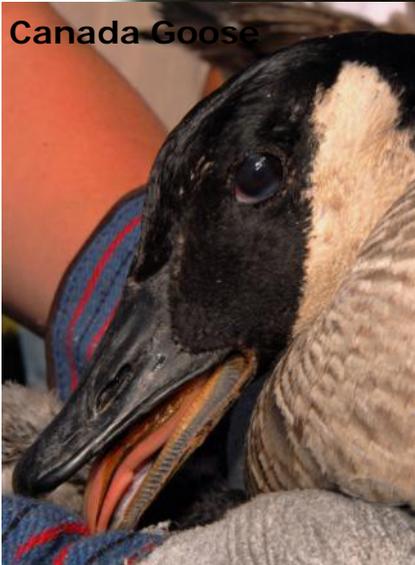

**Black Bear Cub**

**Immature Bald Eagle**

**Canada Goose**

**Peregrine Falcon**

**Deer**
