

Road Improvement Projects Southwest Region

There are multiple road improvement projects occurring on various game lands in the Southwest Region. These projects will improve 145,973 feet of existing roads on 8 different state game lands. These projects are all funded through Pittman-Robertson Funds. Most projects consist of grading the existing roads, re-establishing proper drainage, applying a good base and then putting a top-coat of smaller shale for a smooth running surface. The projects are designed for two primary purposes. First to improve existing state game land roads to allow for easier access by our Food and Cover staff to maintain the game lands to improve habitat for wildlife. Secondly, some roads are open to public travel at certain times of the year and the improvements will allow for better hunter access farther into the game lands.

All improvement projects should be completed prior to the start of archery season as to not inconvenience hunters.
