# Annual Deer Population Report \& 2023-24 Antlerless License Allocation Recommendations 

April 14, 2023

Pennsylvania Game Commission<br>Bureau of Wildlife Management<br>Deer and Elk Section

Summary of 2023-24 Antlerless Allocations to Achieve Deer Plan Goals

| WMU | Population Trend | Deer Plan Population Objective | 2022-23 <br> Approved Allocation | 2023-24 <br> Deer Plan <br> Allocation | Comments |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1A | Stable | Stabilize | 43,000 | 46,000 |  |
| 1B | Stable | Stabilize | 34,000 | 37,000 |  |
| 2A | Increasing | Stabilize increase | 39,000 | 46,000 | Increase previous 3-year mean antlerless harvest by 1 antlerless deer/mi ${ }^{2}$ to stop increasing population trend. |
| 2B | Increasing | Stabilize increase | 49,000 | 53,000 | Increase previous 3 -year mean antlerless harvest by 1 antlerless deer/ $\mathrm{mi}^{2}$ to stop increasing population trend. |
| 2C | Stable | Reduce (cwd/ forest) | 67,000 | 88,000 | Increase previous 3 -year mean antlerless harvest by 2 antlerless deer/ $\mathrm{mi}^{2}$ to reduce population because of CWD \& Forest Impacts. |
| 2D | Stable | Reduce (CwD) | 74,000 | 86,000 | Increase previous 3 -year mean antlerless harvest by 2 antlerless deer/ $\mathrm{mi}^{2}$ to reduce population because of CWD. |
| 2E | Stable | Reduce (CwD) | 42,000 | 52,000 | Increase previous 3 -year mean antlerless harvest by 2 antlerless deer/ $\mathrm{mi}^{2}$ to reduce population because of CWD. |
| 2 F | Stable | Reduce (cwd) | 37,000 | 49,000 | Increase previous 3 -year mean antlerless harvest by 2 antlerless deer/mi to reduce population because of CWD. |
| 2G* | Stable | Stabilize | 31,000 | 35,000 |  |
| 3A | Stable | Stabilize | 19,000 | 21,000 |  |
| 3B | Stable | Stabilize | 33,000 | 32,000 |  |
| 3 C | Stable | Stabilize | 37,000 | 40,000 |  |
| 3D | Stable | Reduce (Forest) | 41,000 | 41,000 | Maintain previous allocation (already increased over the past 3 years) to reduce population because of forest impacts. |
| 4A | Stable | Reduce (cwd) | 50,000 | 61,000 | Increase previous 3 -year mean antlerless harvest by 2 antlerless deer/ $\mathrm{mi}^{2}$ to reduce population because of CWD. |
| 4B | Stable | Reduce (cwd) | 34,000 | 46,000 | Increase previous 3-year mean antlerless harvest by 2 antlerless deer/ $\mathrm{mi}^{2}$ to reduce population because of CWD. |
| 4 C | Stable | Stabilize | 31,000 | 32,000 |  |
| 4D | Stable | Reduce (cwd) | 55,000 | 77,000 | Increase previous 3 -year mean antlerless harvest by 2 antlerless deer/mi ${ }^{2}$ to reduce population because of CWD. |
| 4 E | Stable | Reduce (cwd) | 42,000 | 54,000 | Increase previous 3 -year mean antlerless harvest by 2 antlerless deer/ $\mathrm{mi}^{2}$ to reduce population because of CWD. |
| 5A | Stable | Reduce (CwD) | 31,000 | 40,000 | Increase previous 3 -year mean antlerless harvest by 2 antlerless deer $/ \mathrm{mi}^{2}$ to reduce population because of CWD. |
| 5B | Stable | Stabilize | 60,000 | 60,000 |  |
| 5 C | Stable | Stabilize | 70,000 | 70,000 |  |
| 5D | Stable | Stabilize | 29,000 | 29,000 |  |

*WMU 2H has been dissolved back into WMU $2 G$

Data presented in this report represent collaborative efforts between the U.S. Forest Service, Pennsylvania's Department of Conservation and Natural Resources, the Pennsylvania Cooperative Fish and Wildlife Research Unit at Penn State University, Responsive Management, and the Game Commission's bureaus of Information and Education, Wildlife Habitat Management, and Wildlife Management. For more information on the deer management program and data and methods used to assess progress towards management goals, visit the Game Commission's website, www.pgc.pa.gov, to find the "2009-2018 White-tailed Deer Management Plan".

## Deer Management Goals

Deer management goals direct Game Commission staff in formulating deer management recommendations. Current management goals that directly affect antlerless allocations are to manage deer for healthy deer, healthy forest habitat, and acceptable levels of deer-human conflicts. These goals were identified by a group of public stakeholders in 2002 and continue to be supported by a clear majority of Pennsylvania citizens and hunters (Figure 1).

Figure 1. Percent of respondents that agree with deer management goals. The public values come from a citizen survey completed by Responsive Management in 2012 (link), and the hunter values come from the most recent deer hunter survey completed by the Deer and Elk Section and Bureau of Wildlife Management in 2020 (link), with results similar to previous deer hunter surveys in 2011 (link), 2014 (link), and 2017 (link).

## Step-by-Step Deer Management Recommendation Guide

The deer management program considers data for each goal to arrive at a deer population recommendation in a defined process (see pages 7 and 8 ). This process has been revised as new data are incorporated into the program and will continue to evolve as more data and understanding are gained. Decision points (i.e., fawn to doe ratio declining?) are based on published protocols from the wildlife and forestry professions.

## Do PA residents want fewer or more deer?

This question is answered using results of the most-recent survey conducted by Responsive Management of Pennsylvania residents (2019). If most surveyed residents in a WMU want less deer, the recommendation would be to reduce the deer population. If the deer health goal is met, forest habitat is good, and WMU residents want more deer, the recommendation would be to increase the deer population.

## Is CWD present in free-ranging deer?

This question is answered using results from the thousands of deer tested annually for chronic wasting disease (CWD). If CWD is present in free-ranging deer, then management recommendations are to stabilize or reduce WMU populations. Additional antlerless deer can be removed using Deer Management Assistance Program permits in accordance with the CWD response plan. Increasing the antlerless harvest serves 2 purposes that are important to efforts to contain CWD; (1) increased antlerless harvest removes more deer from the population and allows the Game Commission to test more deer in our efforts to obtain the best information on the extent of the disease, and (2) increased antlerless harvest can reduce deer populations and spread of CWD.

## Is fawn to doe ratio declining?

This question is answered using results from the age structure of the antlerless harvest. These data are collected each year by trained Game Commission deer agers from across the state. If the proportion of fawns in the antlerless harvest (hereafter referred to as fawn to doe ratio) is declining and the population is not achieving its objective (i.e., population is declining and objective is to maintain a stable deer population), then the antlerless allocation would be reduced to stop the population decline. The antlerless harvest will have the greatest influence on the population because hunting accounts for most deer mortalities in Pennsylvania. If the fawn to doe ratio is stable or if the population is meeting its objective (i.e., population is stable and objective is stable), no management action is taken.

## Has deer population been stable or increasing for 6 years?

This question is answered using results from the Pennsylvania Sex-Age-Kill deer population model and deer harvest indices (i.e., antlered harvest, antlerless catch-per-unit-effort). The 6-year time period is necessary because of the 5-year time period to collect the forest data. The sixth
year is added because only $2^{\text {nd }}$ year seedlings are counted in the forest data. As a result, a complete forest data set includes effects of deer from the previous 6 years.

If the deer population is decreasing the recommendation is to stabilize the population at the lower level to see if forest habitat improves given the lower deer population. If the deer population is stable or increasing, the process continues to the next step.

## Is forest habitat good?

This question is answered using results from the Pennsylvania Regeneration Study. If $70 \%$ of forested plots have adequate regeneration, forest habitat is considered good. If less than $50 \%$ of forested plots have adequate regeneration, forest habitat is considered poor. If $50 \%$ to $70 \%$ of forested plots have adequate regeneration, forest habitat is considered fair.

## Is plot to plot regeneration improving?

This question is answered using results from the Pennsylvania Regeneration Study. In this step, results from individual plots are compared in a paired analysis. For example, plot measurements from 2005 are compared to their remeasured results in 2010 to see if regeneration has improved on individual plots. All plots with 2 measures are included in this analysis. If regeneration is improving, then the deer population trend can be stabilized. If regeneration is not improving, the process continues to the next step.

## Is plot to plot deer impact improving?

This question is answered using results from the Pennsylvania Regeneration Study. In this step, results from assessments of deer impact on a scale from 1 (very low) to 5 (very high) are compared in the same way as the plot to plot regeneration analysis. If deer impact is improving (i.e., going from a 4 [high] to 3 [moderate]) on enough plots, then the deer population trend can be stabilized. If deer impact is not improving, the process continues to the next step.

## Is mean deer impact 3 or less?

This question is answered from the Pennsylvania Regeneration Study. In this step, the mean deer impact for all plots measured in the most recent 5-year period is statistically compared to an objective of 3 (i.e., moderate impact). If deer impact is significantly greater than 3 (moderate), then the deer impact is too high and the deer population should be reduced. If deer impact is less than or not different from 3 (moderate) then the deer population trend can be stabilized.

Guides on pages 7 and 8 are used to develop deer population recommendations based on goals and objectives of deer management plan. Recommendation guide for WMUs 2B, 5C, and 5D differs because of lack of forest data in these highly developed WMUs.

# Deer Management Recommendation Guide 

## FOR WMUs 2B, 5C, and 5D

## Step-by-Step Antlerless License Allocation Calculations

Antlerless allocations are calculated by referring to results from previous seasons. For example, if a population has remained stable with an annual harvest of 3,000 antlerless deer, the same level of harvest would be expected to maintain the stable population. If it has taken 3 antlerless licenses to harvest 1 antlerless deer over the last 3 years, the allocation to stabilize this population would be 3,000 antlerless deer harvested $\times 3$ licenses/antlerless deer harvested $=$ 9,000 antlerless licenses.

The 3-year average for antlerless licenses needed to harvest 1 antlerless deer was used for calculations in WMUs 2B, 2C, 2D, 2E, 4A, 4B, 4D, 5A, 5C, and 5D, where the concurrent firearms season has been 2 weeks for the previous 3 years (Table 1). The 2-year average was used in the calculation for WMUs $1 \mathrm{~A}, 1 \mathrm{~B}, 2 \mathrm{~A}, 2 \mathrm{~F}, 2 \mathrm{G}, 3 \mathrm{~A}, 3 \mathrm{~B}, 3 \mathrm{C}, 3 \mathrm{D}, 4 \mathrm{C}, 4 \mathrm{E}$, and 5 B , because the concurrent season was increased from 1 week to 2 weeks in 2021 (Table 1).

Table 1. Antlerless licenses needed to harvest 1 antlerless deer (license/deer) based on historic results for each WMU. Bold values used in calculations.

| WMU | $2020-21$ | $2021-22$ | $2022-23$ | 2-year Average | 3-year Average |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1A | 2.8 | 3.0 | 3.1 | $\mathbf{3 . 1}$ | 3.0 |
| 1B | 2.3 | 2.6 | 2.2 | $\mathbf{2 . 4}$ | 2.4 |
| 2A | 3.9 | 3.7 | 3.5 | 3.6 | 3.7 |
| 2B | 3.3 | 4.0 | 3.1 | 3.6 | 3.5 |
| 2C | 3.7 | 4.3 | 4.0 | 4.2 | 4.0 |
| 2D | 3.2 | 3.7 | 3.2 | 3.5 | 3.4 |
| 2E | 3.4 | 4.4 | 3.9 | 4.2 | 3.9 |
| 2F | 3.6 | 3.2 | 3.2 | 3.2 | 3.3 |
| 2G | 4.1 | 4.9 | 4.6 | 4.7 | 4.5 |
| 3A | 3.1 | 3.6 | 3.4 | 3.5 | 3.4 |

## Chronic Wasting Disease (CWD), as of April 2023

## Legend

WMUs with CWD Detected in Wild Deer
WMUs with No CWD Positive Wild Deer Detected

Bureau of Wildlife Management, Deer and Elk Section April 2023

## 2022-23 Regular Firearms Season and Other Changes

## Concurrent Seasons:

In 2001, a 12-day concurrent antlered and antlerless firearms season began. The objectives of this longer antlerless season were to give hunters more time to hunt antlerless deer and to create a more consistent harvest from year to year. Antlerless allocations in each WMU determined antlerless harvest. Beginning in 2008, some WMUs were changed to a 5-day antlered only season followed by a 7-day concurrent antlered and antlerless season. In 2010, 2011, 2014, 2015, and 2017 additional WMUs were changed to the $5 / 7$ season format. By 2019, only WMUs 2B, 5C, and 5D had a two-week concurrent antlered and antlerless firearms season. For the 2020-21 regular firearms season, a two-week concurrent antlered and antlerless firearms season was in place for WMUs 2B, 5C, and 5D as well as WMUs where CWD was detected in wild deer and all other WMUs were a 5-day antlered only season followed by a 7-day concurrent antlered and antlerless season. For the 2021-22 and 2022-23 seasons, all WMUs had a two-week concurrent antlered and antlerless firearms season and antlerless allocations were adjusted to account for the additional days.

## Saturday Opener and Sunday Hunting:

In 2019, a Saturday was added to the regular firearms season as the opening day of the season, instead of the Monday which was historically the opening day. Additionally, in 2020, a Sunday was added to the regular firearms season after the opening day (Saturday), allowing for an opening weekend. This continued for the 2022-23 and 2023-24 seasons.

Antlerless license purchase limits:
In 2021, the cap on the number of WMU antlerless licenses hunters could purchase was changed from 3 for all WMUs except 2B, 5C, and 5D to 6 for all WMUs with the option to purchase more if they filled one of those and reported it, given WMU licenses were still available. However, most WMUs sold out prior to the season or shortly thereafter. This limit continued for the 202223 and 2023-24 seasons.

Antlerless license purchase options:
In early 2023, a new law took effect that enables all license-issuing agents to sell antlerless deer licenses, meaning hunters in the 2023-24 license year will be able to purchase them online or anywhere else licenses are sold.

## 2022-23 Antlered Deer Harvest Density

(Estimated antlered deer harvested per square mile of area)

## Legend

Less than 2.0 antlered deer harvested per square mile
2.0 to 2.9 antlered deer harvested per square mile
3.0 to 3.9 antlered deer harvested per square mile
4.0 to 5.6 antlered deer harvested per square mile

## Recommendation Guides and Deer Population Datasheets

Recommendation guides (see pages 7 and 8) provide a step-by-step progression through the deer plan goals and measurable objectives to arrive at a deer population recommendation.

Supporting data for these guides are found in the individual WMU datasheets that follow.
