The road surface must have a finished depth at least 12" with a 16' wide roadway and a finished driving surface width of 12' wide. Stone can be excavated from a stone pit along the already existing haul road into the site. The approximate centerline of the new road is marked with a single orange ring.
 - a. Existing Haul Road – 1,800 feet; 1,450 tons of sub-base
 - b. New haul road – 2,715 feet; 2,200 tons of sub-base
 - 2. The contractor must first cut all trees within 25 feet on either side the center line including the orange marked trees. All stumps within the new road corridor must be removed to construct the new road.
 - 3. All haul roads used by the operator will be suitably drained and crowned (2-6% slope) with a road grader or dozer with 6-way blade at the conclusion of the sale or if the roads are in poor condition and the sale is going to be left idle for any length of time.
 - 4. A stone rake and 10-ton vibrating roller will also be required following grading operations. All road edges including berms will be graded to a contour that allows for the sheet flow of water from the driving surface to an area where it can infiltrate naturally or a ditch if necessary, as determined by the regional forester.
 - 5. All specified road work must be approved by the regional forester. Stone Requirements – all values listed are estimates. Considerably more stone could be necessary depending on road

condition and operator care. All stone requirements assume a 16' wide roadway with a 12' wide driving surface once completed. See Attachment A.

6. If suitable stone is not found on site, the buyer must supply his own approved stone from another source. The "minimum" sub-base requirements do not include stoning landings or pipeline crossings. To properly fix roads and stone landing sites, considerably more sub-base could be required. The stone locations will be identified by PGC personnel during road improvement operations.

Roads to Maintain

1. All haul roads used by the operator will be suitably drained and crowned (2-6% slope) with a road grader or dozer with 6-way blade at the conclusion of the sale or if the roads are in poor condition and the sale is going to be left idle for any length of time.
 - a. Kennedy and Round Top Roads – 4,200'
2. A stone rake and 10-ton vibrating roller will also be required following grading operations. All road edges including berms will be graded to a contour that allows for the sheet flow of water from the driving surface to an area where it can infiltrate naturally or a ditch if necessary, as determined by the regional forester.

Broad-based dips

Approximately 15 broad-based dips will be constructed at the conclusion of the sale to stabilize the new and existing haul road. They will be constructed in accordance with the BMP's.

Tail drains and turnouts

Will be added or cleaned at the discretion of the regional forester.

Ditches and other drainage structures
