e) Potential landing locations marked on the attached map. Landing locations and sizes will be determined through consultation between the successful bidder and the Regional Forester. Trees to be cut for landings will be tallied at that time.
f) A few steep areas may require dozed skid trails.
g) In blocks 1, 3, 6, and 7 all trees marked with yellow paint must be cut. No other trees are to be cut in these blocks. These blocks have been mowed, but any remaining 1-6 inch stems must be cut (excepting conifers, dogwood and serviceberry)
h) In blocks 2, 4, 5 and 8, reserve trees are marked with red paint and are not to be cut. All trees that are not marked with red paint are to be cut down to 2" DBH (excepting conifers, dogwood and serviceberry).
i) Block 9 is a road to construct. The boundaries of this road are marked with orange R's. All trees between the R's are to be cut and stumped. R trees are reserved.

I) Trees that are to be cut within the block are not to be placed over the blue block boundary.
$\mathrm{m})$ Cull portions of the tree are to be left at the stump. Logs and pulpwood are to be cut to length in the woods to minimize short ends and top debris at the landings.
n) Extra caution should be taken to avoid felling damage or skidding damage to reserved trees.

## 3) US / STATE / LOCAL ROADS

Contractor will be responsible for all permits and bonds on both state and township roads.

## 4) GAME LAND ROADS

PGC ROADS TO MAINTAIN

1. The primary PGC road to access blocks 1-9 was recently improved and stoned and will not need any work prior to hauling. At the conclusion of hauling, this road (approximately 8,300 feet) will be graded and returned to its pre-sale condition. Existing culverts must be cleaned if needed at the end of the sale

## ROADS TO BUILD

1. Block 9 is an approximately $2,500 \mathrm{ft}$ long road to construct to access blocks 3 and 4. All trees between the orange R's are to be cut and stumped. The R trees are reserved. The road is to be constructed with a minimum 12 foot running surface and sloped down hill where possible with tail ditches and other water control structures to be installed at the direction of the Regional Forester. Stumps are to be placed a minimum of 10 feet from the edge of the new road in piles with gaps at least every 50 feet.
a. 88 tons of 3A modified limestone are allocated to treat any trouble spots on this road.
b. At the conclusion of hauling, this road will be graded, water barred and seeded to the seed mix specified below.
2. A short haul road of approximately 750 feet will need to be constructed off Woomer Divide Road (Howard Twp.) to access a landing location for blocks 1 and 2. This road is not marked in the field and this distance is an estimate. The exact location and distance of this road will be determined through consultation between the contractor and the Regional Forester. This road must have a 12 foot running surface with all necessary water control structures as directed by the Regional Forester.
a. $\mathbf{2 6 4}$ tons of 3A modified limestone will be applied at a rate of 6 inches deep to this entire road surface. The new road surface must be graded and a 10 ton minimum vibrating roller must be used to compact the 3A limestone following application. All road edges including berms will be graded and rolled to a contour that allows for the sheet flow of water from the driving surface to an area where it can infiltrate naturally or into a ditch if necessary, as determined by the Regional Forester.
b. The contractor is responsible for any necessary coordination with Howard Twp. One $18 " \times 20$ " foot smooth-walled plastic culvert pipe will be required at the junction of the new road and Woomer Divide Road. This pipe is to be bedded and covered with 22 tons of 2A modified limestone.
3. This is a minimum and more stone/shale may be required should conditions dictate.

## Road Work Totals:

$-3,250$ ' of new road to build<br>$-8,300$ ' of existing road to maintain<br>- 352 tons 3A modified limestone<br>-22 tons 2A modified limestone<br>-1) $18^{\prime \prime} \times 20^{\prime}$ smooth walled plastic culvert pipe

## 5) LANDINGS

a) There is one existing landing at the junction of blocks 5 and 6 . All other landing locations (four) will need to be constructed. Proposed locations are shown on the sale map. Exact landing locations and sizes will be determined in consultation with the Regional Forester. Trees in landing areas will be tallied at the time. Small road-side landing area may be permitted in blocks 1-9 with the approval of the Regional Forester. There will be added grading and seeding expenses if additional landings are used. Only designated landings are to be used, unless approved by the Regional Forester.
a. Stone will be required for the approach for the block 7-8 landing and the block 5-6 landing. Each landing area is allocated 66 tons for a total of 132 tons of 3A modified limestone
b) Logging debris is to be kept to a minimum. All logs and pulpwood are to be marked to length in the woods to eliminate short ends at the landings.
c) Upon completion of the sale, all landings are to be cleared of stumps, slash, and debris, leveled, and seeded according to specifications outlined in Section 7 below.

## Landing Totals:

-5 proposed landings, 4 of which to construct
-132 tons of 3A modified limestone

## 6) SKIDDING

a) Skid trails will be designated by the Regional Forester. Existing trails are to be used for skidding and must be left open. Main skid trails and previously existing trails are to be opened, leveled, seeded, and have water bars added at the conclusion of the sale. Final condition of skid trails will be left to the discretion of the Regional Forester or designee on the ground.
b) Short sections of dozed skill trail may be required in steep areas of blocks 2, 6 and 8 . Any such trails must be water barred when not in use and seeded upon completion of skidding.
c) All main skid trails and any sections of skid trail with a high potential for erosion problems must also be seeded according to specifications outlined in Section 7 below. Seeding of skid trails will be directed by the Regional Forester or designee on the ground.
d) Skidders are to be kept off haul roads unless approved by Regional Forester or designee on the ground. If skidding on haul roads is necessary, grading and seeding will be required on these roads, if not already specified in section 4.
e) Wet areas should be avoided when skidding. No skidding across small drainages will be permitted without the use of temporary bridges. Any treetops which are felled into small wet areas should be left in the water rather than pulled out.
f) No skidding is permitted outside any of the sale boundaries unless first approved by the Regional Forester or designee on the ground.
g) Water bars will need to be added to skid trails that sit idle for one month or more.
h) Rutting of the woods, particularly off main skid trails will be closely monitored by PGC staff. Excessive rutting will result in the shutdown of all sale activity until rutted areas are remediated.

## 7) SEEDING

a) Upon completion of the sale, approximately 4 acres of haul roads, landings and main skid trails are to be graded, cleared of rocks and debris, and seeded according to the following per acre rates:
